с Л., ерн 1899.

1. $f(x, y, z)$ is a function of three variables.
 2. The domain of f is the set of all points (x, y, z) in $\mathbb{R}^3$ such that $x^2 + y^2 + z^2 \leq 1$.
 3. The range of f is the set of all values w such that $w = f(x, y, z)$ for some (x, y, z) in the domain.
 4. The level sets of f are the surfaces $f(x, y, z) = c$ for constant c .
 5. The gradient of f is the vector $\nabla f = (f_x, f_y, f_z)$.
 6. The directional derivative of f in the direction of a unit vector $\mathbf{u}$ is $\nabla f \cdot \mathbf{u}$.
 7. The Hessian matrix of f is the matrix of second partial derivatives $H_f = (f_{ij})$.
 8. The Taylor series of f at a point $\mathbf{a}$ is $f(\mathbf{a}) + \nabla f(\mathbf{a}) \cdot (\mathbf{x} - \mathbf{a}) + \frac{1}{2} (\mathbf{x} - \mathbf{a})^T H_f(\mathbf{a}) (\mathbf{x} - \mathbf{a}) + \dots$.
 9. The Lagrange multiplier method is used to find the extrema of f subject to a constraint $g(x, y, z) = 0$.
 10. The method of steepest descent is used to find the minimum of f starting from a point $\mathbf{a}$.

Altogether, we can see that
the whole thing is a very
simple and easy one to do.
The only thing to be careful of
is to make sure that the
whole thing is done in a
simple and easy way.

$\mathbb{Z}^n$ is a free $\mathbb{Z}$ -module of rank n .
 Let $\mathcal{B}$ be a basis for $\mathbb{Z}^n$.
 Then $\mathcal{B}$ is a linearly independent set
 of n elements in $\mathbb{Z}^n$.
 Conversely, if $\mathcal{C}$ is a linearly independent
 set of n elements in $\mathbb{Z}^n$, then $\mathcal{C}$ is a basis.
 This is a consequence of the fact that $\mathbb{Z}$ is a
 principal ideal domain.

Handwritten cursive script, likely a sample of a specific handwriting style (e.g., Kurrent or Sütterlin). The text is written on lined paper and consists of several lines of stylized, flowing characters. The script is dense and characteristic of early 20th-century German calligraphy.
